-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claims 2-5 are objected to as being indefinite. In claim 2, it is not clear that the temperature sensor is used to control the fan, or even connected to anything. In regard to claim 3, only one sensor is shown to measure the combustion chamber, the other measures ambient temperature (see claim 4). Correction is required. Claims 2-5 contain allowable subject matter.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Walter (6311887).

Walter shows a fastener including a fan at 80 and discloses (col.12, lines 43-53) that a microprocessor circuit offers increased flexibility (programmable) because of software. The microprocessor controls the fan and is responsive to ambient temperature to fine tune the air to fuel ratio. While the fan is not explicitly controlled by temperature, claim 1 merely sets forth that the fan "can be set as a factor of a measured temperature", and because the microprocessor is programmable, the fan could be.
